Biodeodorants are a type of treatment agent that uses the principle of microbial degradation to neutralize or remove malodorous substances. They convert malodorous molecules into odorless or low-odor substances such as carbon dioxide, water and minerals through the metabolic activities of microorganisms. The application of biodeodorants can significantly improve air quality, increase environmental comfort, and reduce the potential impact of odor on human health. With the increasing demand for environmentally friendly technologies, the use of biodeodorants has received increasing attention.
