Abstracts

The biological product manufacturing is a complex process which produces products derived from recombinant DNA technology to develop a series of processes to manufacture therapeutic products. A biological product can be a virus, antitoxin, vaccine, blood component or derivative, allergenic product, or analogous product, or any therapeutic serum used for the treatment of a disease in humans. These biological products were developed from multicellular systems comprising of plants, animals, unicellular organisms and a mammalian cell. Biological products are composed of sugars, nucleic acids or combination of both.

SCOPE OF THE REPORT:

This report studies the Biological Product Manufacturing market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Biological Product Manufacturing market by product type and applications/end industries.

The biological products are produced in three ways: by developing ways to achieve commercial production of the substance to be used, by gene alteration of the molecule and finally by developing an entirely new substance. Some of the tools used by modern day researcher in the manufacturing of biological products are recombinant DNA and monoclonal antibodies. Recombinant DNA involves altering of the DNA chain of one organism with desired DNA molecule to produce a novel biological product. Monoclonal antibodies were developed from single cell cultures using cloning techniques; these were designed to fight against toxins, viruses, and cancer cells. The first genetically engineered biological product approved for use in the U.S. was a vaccine for hepatitis-B which was approved in 1986, in the same year, other biological products like therapeutic

monoclonal antibodies (MABs) and alpha interferons were approved. However, the major restraining factors for biological product manufacturing market are the high cost of manufacturing of biological products, high level of price competition amongst competitors and efficacy and reliability of the biological product. The global Biological Product Manufacturing market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Biological Product Manufacturing.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
