## Abstracts

The global Biological Seed Treatment Product market size is expected to reach \$ 1811 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032).

Biological Seed Treatment Product refers to a type of environmentally friendly agricultural product made from beneficial microorganisms (such as bacteria, fungi, and actinomycetes), plant extracts, or natural biological substances, which is applied to crop seeds through coating, dressing, soaking, or other methods. It is designed to improve seed germination rate, enhance seedling vitality, resist soil-borne diseases and pests, promote root development, and reduce the use of chemical pesticides and fertilizers, thereby achieving green and sustainable crop production.

Demand for Biological Seed Treatment Product is driven by the global emphasis on green agriculture, the tightening of environmental protection policies on chemical pesticides, the increasing demand for high-quality and safe agricultural products, and the need to improve crop stress resistance and yield. Business opportunities lie in the research and development of high-efficiency and multi-functional biological strains, the development of stable and easy-to-use application formulations, the expansion into emerging agricultural markets, and the integration of product services with modern agricultural technologies to meet the diverse needs of farmers and agricultural enterprises.
