## Abstracts

The global Biological Thrombolytic Drugs market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Biological thrombolysis is a treatment that uses enzymes to dissolve or degrade blood clots in the body. These enzymes can break down fibrin and other components in the thrombus, thereby promoting the dissolution of the thrombus. Biological thrombolysis is often used to treat cardiovascular disease, particularly conditions such as myocardial infarction and stroke, because these conditions often involve the formation of blood clots.

This report studies the global Biological Thrombolytic Drugs production, demand, key manufacturers, and key regions.
