According to our (Global Info Research) latest study, the global Biologics Targeting CCR4 market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

CCR4-targeted biologics are biologics used to treat specific diseases that inhibit or modulate the function of the CCR4 receptor. CCR4 is a cell surface receptor in the immune system that is often associated with regulating immune responses and cell movement. Such biologics are often designed to address abnormal CCR4 activity in certain diseases, particularly those involving the immune system. Among them, one of the most common application areas is the treatment of malignant lymphomas, especially T-cell lymphomas, such as lobectomy cell lymphoma and cutaneous T-cell lymphoma. CCR4 biologics can help inhibit tumor growth by interfering with CCR4 receptor signaling and limiting the proliferation and spread of malignant T cells.
