## Abstracts

According to our (Global Info Research) latest study, the global Biomass Briquetting Machine market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A biomass briquette machine is a device used to compress biomass raw materials (such as agricultural waste, forestry byproducts, urban organic waste, etc.) into fuel blocks or feed blocks of a certain shape and size. These fuel blocks are usually called biomass fuel or biomass pellets, and they can be used for heating, power generation or as industrial fuel. The briquette machine mechanically compresses the biomass raw materials to remove part of the moisture, increase its calorific value, and facilitate storage and transportation.
