According to our (Global Info Research) latest study, the global Biomass Fuel Dryer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The biomass fuel dryer is a kind of equipment specially used for drying biomass fuel (such as wood chips, straw, peanut shells). It evaporates the moisture in the biomass fuel by heating and transferring heat to improve the calorific value and flammability of the fuel. The biomass fuel dryer is composed of rotating body, lifting plate, transmission system, support point equipment and sealing ring and other components.

The working process of the biomass fuel dryer: feeding, heating, heat convection, moisture discharge, and fuel output, has the characteristics of: high efficiency, energy saving, automatic control, environmental protection, reliability, and multi-functional application.
