According to our (Global Info Research) latest study, the global Biomass Hot Blast Stove market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Biomass hot blast stove is a hot blast stove that uses biomass pellets as fuel. After the biomass fuel is burned, high-temperature flue gas is produced. The high-temperature flue gas is brought to the heat exchange section through the induced draft fan. After the heat exchange, clean, constant temperature and constant pressure hot air is generated and sent to the heating equipment through pipelines. According to different working principles, biomass hot blast stoves can be divided into direct-fired hot blast stoves and indirect heat exchange hot blast stoves. Compared with other hot blast stoves, it has the advantages of good combustion effect, high thermal efficiency, green environmental protection and no pollution, low carbon emissions, and good energy saving effect.
