## Abstracts

The global Biomass Steam Generator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to the white paper 'China's Energy Development in the New Era' published by the Chinese government website, China puts non-fossil energy in the priority position of energy development, and vigorously promotes the replacement of high-carbon energy with low-carbon energy and the replacement of fossil energy with renewable energy. In the '14th Five-Year Plan' During the period, China will accelerate the release of the potential of the biomass energy market, which is expected to stimulate social investment of about 1.2 trillion yuan, process about 350 million tons of various organic wastes annually, and drive 1 million jobs.

Under former President Donald Trump, the U.S. Environmental Protection Agency plans to follow in Europe's footsteps and list biomass as carbon neutral. The EU has set a target of 32% of its energy coming from renewable sources by 2030, and biomass is one of the most important renewable energy sources, accounting for 12% of the EU's final energy demand.

Government policy support and technological advancements have further fueled the growth of the biomass steam generator market, providing an important solution to achieve clean energy transition and sustainable development goals.

A biomass steam generator is a device that uses biomass as fuel to generate steam. It transfers the heat energy released by biomass combustion to water or other working fluids to convert them into steam.
