Abstracts

The global Biomass market size is expected to reach \$ 55813 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

Biomass refers to various organic substances formed through photosynthesis by using natural resources such as the atmosphere, water, and land. It generally refers to all organic matter that has life activity or originates from life activity, and that is capable of growth and renewal. In a broad sense, biomass includes plants, microorganisms, animals that feed on plants and microorganisms, and the waste generated by them. Typical examples include crops, crop straw, wood, forestry waste, animal manure, and other organic waste.

In a narrow sense, biomass mainly refers to lignocellulosic materials such as straw, branches, and wood chips generated during agricultural and forestry production, excluding grains and fruits, as well as by-products from agricultural product processing, agricultural and forestry waste, livestock and poultry manure, and other breeding waste. Biomass is characterized by renewability, low pollution, wide availability, and dispersed resource distribution. It is an important raw material source for the development of biomass energy, green chemicals, and low-carbon fuels.

This report studies the global Biomass demand, key companies, and key regions.
