## Abstracts

According to our (Global Info Research) latest study, the global Biomassfired Heating Plant market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A biomass-fired power plant produces electricity and heat by burning biomass in a boiler. The most common types of boilers are hot water boilers and steam boilers. Wood chips, residues and other types of biomass are used in the boilers, in the same way as coal, natural gas and oil.

Fuel is stored in a bunker for further transport to the boiler. In the boiler, water is heated to high temperature under pressure. Steam from the boiler powers the turbine, which is connected to the generator. Steam that has passed through the turbine, heats district heating water, which is distributed through the district heating network's piping.

In Europe market, Biomassfired Heating Plant key players include the EON, Dong Energy, Drax Group, Aalborg, Comsa, Abantia, Aker Group, Fortum Keilaniemi, Eidsiva Fjernvarme, Suez, Statkraft, EHP, VATTENFALL, ZE PAK and MGT Power, etc, with about 50% market shares.
