Abstracts

Biomedical refrigerators and freezers are medical equipment, used for storing various biological samples such as biological reagents, blood, blood derivatives, medicines, vaccines, deoxyribonucleic acid (DNA), ribonucleic acid (RNA), and flammable chemicals. Samples with biological origin require precise conditions for effective storage. In comparison with domestic refrigerators and freezers, biomedical refrigerators and freezers provide optimum conditions for efficient storage of samples with biological origin.

Scope of the Report:

This report focuses on the Biomedical Refrigerator and Freezer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Key factors driving the growth include the growing prevalence of chronic diseases, rising demand for storing biological products, blood samples, blood reagents, vaccines, DNA samples and other chemicals. In addition, the need to provide thermal insulation and avoid product degradation is a critical factor boosting the usage rates. Factors like the increasing emphasis on energy efficient refrigerators impelling the prospects for market growth until the end of the forecast period. The environmental challenge for biomedical refrigerator and freezer manufacturers has always been to minimize energy consumption. According to the current standards, refrigerants used have an ozone depleting potential of zero, minimum global warming potential and be non-toxic as well

as inflammable. It is tough to meet all these requirements while maintaining a stable temperature control. Therefore, manufacturers are looking for technologies to maximize efficiency and temperature uniformity while minimizing heat and energy consumption.

North America accounts for the largest share of the global biomedical refrigerators and freezers market, and is expected to dominate the market in the forecast period. Factors contributing to the growth of global biomedical refrigeration and freezers market in North America are presence of large number of healthcare facilities and the rising demand for these equipment's. However, Asia-Pacific is expected to be the fastest growing region for the biomedical refrigerators and freezers market. This growth is attributed to the rising number of blood banks, increasing number of healthcare facilities, rising initiatives of blood donation programs and presence of market growth oriented regulatory policies. Increasing tourism in emerging countries further promotes healthcare spending into biomedical refrigerators and freezers market.

The worldwide market for Biomedical Refrigerator and Freezer is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
