## **Abstracts**

Biometrics technology is used for identification and authentication of people with the help of their biological and behavioral characteristics. An employee is asked for his user ID as soon as he logs into the retail PoS system. However, without typing in his password, he can simply scan his finger on the biometric fingerprint reader. Every time an employee tries to access a password-protected area, he is required to scan his finger. This leads to increased accountability, which ensures protection from accidental and intentional damage to the company's data.
