According to our (Global Info Research) latest study, the global Biometric Sensors market size was valued at USD 1218.8 million in 2023 and is forecast to a readjusted size of USD 1806.3 million by 2030 with a CAGR of 5.8% during review period.

Biometrics is the technical term for body measurements and calculations. It refers to metrics related to human characteristics. Biometrics authentication is used in computer science as a form of identification and access control. It is also used to identify individuals in groups that are under surveillance. Biometric identifiers are the distinctive, measurable characteristics used to label and describe individuals. Biometric identifiers are often categorized as physiological versus behavioral characteristics. Physiological characteristics are related to the shape of the body. Examples include, but are not limited to fingerprint, palm veins, face recognition, DNA, palm print, hand geometry, iris recognition, retina and scent. Behavioral characteristics are related to the pattern of behavior of a person, including but not limited to typing rhythm, gait, and voice. Some researchers have coined the term behaviometrics to describe the latter class of biometrics.

Surge in demand for fingerprint identification for getting access in smart devices and smart phones is positively impacting the growth of biometric sensors market. Moreover, increased demand for smartwatches, wearable devices, consumer electronic products, and biometric sensor based tablets, are also contributing in the development of the overall market. Ease of usage of biometric sensors is another factor driving the demand in the market. These sensors are compact and lightweight, which makes them easy to handle and install. Additionally, rising demand for better data safety and security as per the application is another factor propelling the market growth. However, there are some

factors are expected to hamper the market growth. There are several regions whose cultural hindrance is restricting the potential growth of the market. Along with this, lack of standardization of the implementation and development and process is as well expected to bring down the demand of global biometric sensors in the market.
