Biometrics involves the authentication of an individual by evaluating one or more unique biological traits. This authentication can be done through voice recognition, hand geometry analysis, DNA analysis, gait recognition, fingerprint identification, facial recognition, iris recognition, signature verification, and vein recognition. Biometric technologies are considered to be more reliable for authentication compared to physical devices and numeric codes. With advances in hardware, sensors, readers, pattern recognition, and signal and image processing technologies, a number of biometric technologies have been developed to deal with the identification of individuals.
