## Abstracts

According to our (Global Info Research) latest study, the global Biometrics in Government market size was valued at USD 5223.2 million in 2023 and is forecast to a readjusted size of USD 9717.1 million by 2030 with a CAGR of 9.3% during review period.

Biometrics involves the authentication of an individual by evaluating one or more unique biological traits. This authentication can be done through voice recognition, hand geometry analysis, DNA analysis, gait recognition, fingerprint identification, facial recognition, iris recognition, signature verification, and vein recognition. Biometric technologies are considered to be more reliable for authentication compared to physical devices and numeric codes. With advances in hardware, sensors, readers, pattern recognition, and signal and image processing technologies, a number of biometric technologies have been developed to deal with the identification of individuals.

Establishing security in most organizations is of given a paramount importance by respective authorities. This is mainly done in order to keep maintain a veil of secrecy around most of the activities that take place in organizations such as government offices, federal agencies, defense establishments, and others from similar categories. Such rising demand for biometrics in order to avoid security attacks is a key driving factor for the global government biometrics market. Another factor that has bolstered the uptake of the government identification programs involves the rising initiatives by various governmental agencies to promote use of the biometric systems. These initiatives encourage organizations to adopt to advanced biometric systems, in the wake of better healthcare and welfare of citizens of a nation. A surging interest shown by people to get their social security linked with various identification programs has also

managed to significantly raise the utilization of biometrics. Numerous governmental agencies all over the world are planning to set up a single, universal recognition system has acted as a catalyst for the global government biometrics market's growth. However, a chief restraint involves high costs needed to set up advanced biometric systems. Due to such costs, many agencies might get discouraged from using the systems.
