Biometrics is a technological and scientific authentication method based on biology and used in information assurance (IA). Biometric identification authenticates secure entry, data or access via human biological information such as DNA or fingerprints. Biometric systems include several linked components for effective functionality. Biometric workforce management, or time and attendance systems, are installed in workplaces or institutions that record biometrics to monitor the attendance of workers.

The report considers revenues generated from the sales of biometric solutions, including hardware, software, integrated solutions, and services used by enterprises and government organizations to authenticate and monitor employees. Authentication implies identification and access control for premises and system networks while monitoring includes surveillance, time, and attendance. The market is mainly driven by the need for organizations to adopt biometric workforce management to replace traditional security systems. These include PINs, ID cards, passwords, and keys that are traditionally used to record clock in and clock out.
