## Abstracts

According to our (Global Info Research) latest study, the global Biometrics market size was valued at USD 16360 million in 2023 and is forecast to a readjusted size of USD 37620 million by 2030 with a CAGR of 12.6% during review period.

Biometrics are body measurements and calculations related to human characteristics. Biometric authentication (or realistic authentication) is used in computer science as a form of identification and access control. It is also used to identify individuals in groups that are under surveillance.

Biometrics are rising as an advanced layer to many personal and enterprise security systems. With the unique identifiers of your biology and behaviors, this may seem foolproof. However, biometric identity has made many cautious about its use as standalone authentication. Modern cybersecurity is focused on reducing the risks for this powerful security solution: traditional passwords have long been a point of weakness for security systems. Biometrics aims to answer this issue by linking proof-of-identity to our bodies and behavior patterns.

The Global Info Research report includes an overview of the development of the Biometrics industry chain, the market status of BFSI (Fingerprinting Technology, Iris Recognition Technology), Education (Fingerprinting Technology, Iris Recognition Technology), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Biometrics.
