According to our (Global Info Research) latest study, the global Biometrics Spending in Government market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Rapid technological advancements in the field of biometric recognition and identification systems along with advancements in computing and other supporting fields, fueled companies spending significantly on research and development in the biometric systems domain. Such technical accomplishments have stemmed from a strong emphasis on the application of such technologies by national governments, which have in turn resulted in a sharp decline in prices of scanning devices and associated components, in the process providing further impetus to investment in the sector.

Security of data and assets has been a key concern for enterprises, banks, government organizations, telecommunications, hospitals, as well as individuals. Keys, identity badges, and numeric keypads were previously being used to prevent unauthorised access. Technological advancements resulted in the introduction of two-factor authentication, wherein individuals could gain access to secure premises after being authenticated using two different components, such as hardware devices and numeric codes. However, hackers also could easily gain access to hardware devices and obtain numeric codes.
