Bionic robot pets are intelligent robots that simulate the behavior and appearance of real pets. Through advanced sensors, actuators and artificial intelligence technology, they can simulate the natural behaviors of pets such as walking and interacting. The design of these robot pets fully considers the emotional needs of users, providing companionship and entertainment experience similar to real pets, while avoiding the hygiene and maintenance problems that real pets may bring. Bionic robot pets are highly interactive and autonomous, can recognize human emotions and respond accordingly, and provide personalized services to users. They are the product of the combination of modern technology and humanistic care, and provide new options for people who are unable or unwilling to keep biological pets.
