According to our (Global Info Research) latest study, the global Biopharmaceutical Chromatography System market size was valued at US\$ 2218 million in 2025 and is forecast to a readjusted size of US\$ 3599 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global production of biopharmaceutical chromatography systems reached 18,000 units, with an average price of \$120,000 per unit. Chromatography systems are among the core pieces of equipment in downstream separation and purification processes. They primarily achieve the separation, enrichment, and refinement of target products from complex fermentation broths, cell culture media, or reaction systems by leveraging differences in selective interactions between the target components and the stationary and mobile phases. These systems are most maturely applied in the biopharmaceutical industry, where they are widely used for antibody capture, recombinant protein purification, vaccine bulk refinement, plasma protein separation, peptide purification, antibiotic refinement, and the purification of nucleic acid-related products.
