A biopharmaceutical, also known as a biologic (al) medical product, biological, or biologic, is any pharmaceutical drug product manufactured in, extracted from, or semi-synthesized from biological sources. Different from totally synthesized pharmaceuticals, they include vaccines, blood, blood components, allergenic, somatic cells, gene therapies, tissues, recombinant therapeutic protein, and living cells used in cell therapy. Biologics can be composed of sugars, proteins, or nucleic acids or complex combinations of these substances, or may be living cells or tissues. They (or their precursors or components) are isolated from living sources—human, animal, plant, fungal, or microbial.

According to our (Global Info Research) latest study, the global Biopharmaceutical market size was valued at USD 220780 million in 2022 and is forecast to a readjusted size of USD 346690 million by 2029 with a CAGR of 6.7% during review period.
