The global Biopharmaceuticals market size is expected to reach \$ 70090 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

A biopharmaceutical, also known as a biologic (al) medical product, biological, or biologic, is any pharmaceutical drug product manufactured in, extracted from, or semi synthesized from biological sources. Different from totally synthesized pharmaceuticals, they include vaccines, blood, blood components, allergenic, somatic cells, gene therapies, tissues, recombinant therapeutic protein, and living cells used in cell therapy. Biologics can be composed of sugars, proteins, or nucleic acids or complex combinations of these substances, or may be living cells or tissues. They (or their precursors or components) are isolated from living sources—human, animal, plant, fungal, or microbial.
