Abstracts

Bioplastics are plastics derived from renewable biomass sources, such as vegetable fats and oils, corn starch, or microbiota. Production of such plastics tends to require more fossil fuels and to produce more greenhouse gases than the production of biobased polymers (bioplastics). Not all bioplastics are biodegrade nor biodegrade more readily than commodity fossil-fuel derived plastics. Bioplastics are usually derived from sugar derivativesluding starch, cellulose, lactic acid. As of 2014, bioplastics represented approximately 0.2% of the global polymer market (300 million tons).
