According to our (Global Info Research) latest study, the global Bioplastics Packaging market size was valued at USD 8664.4 million in 2023 and is forecast to a readjusted size of USD 17780 million by 2030 with a CAGR of 10.8% during review period.

Bioplastics are primarily a biodegradable group of polymers that can be manufactured from renewable sources. Conventional plastics are increasingly becoming unpopular due to the fact that they can last for a very long time, can be hazardous to current life and the ecosystem in general, and rely heavily on the oil and gas industry for raw materials. Conventional plastics are used in nearly all industries as material for casings, electronics, packaging, and many other products. This high volume of products made out of materials that will not be degraded for centuries is creating a high level of concern, especially in developing economies, and emerging ones are swiftly following suit.

Packaging solutions have incurred a predominant significance among every F&B company. Manufacturers of food products and beverages continue to adopt the most suitable packaging mechanism, befitting the packaging requirements of various kinds of products. Bioplastics packaging is, thus, expected to gain prominence in the global F&B sector, primarily due to the several advantages that it endures. Obtained from biomass sources, bioplastics or biopolymers are innovative packaging materials for food materials, the demand for which is deeply integrated to consumer preferences.

The Global Info Research report includes an overview of the development of the Bioplastics Packaging industry chain, the market status of Food & Beverages (Bio-PET, PLA & PLA Blends), Kitchen Utensils (Bio-PET, PLA & PLA Blends), and key
