Abstracts

Biopolymer coating is the coating using polymers obtained from living organisms such as DNA, RNA, starch, cellulose and proteins. The biopolymer coating is an eco-friendly alternative to petroleum based coating solutions offering broad coating applications and usage while achieving desired biodegradability. The biopolymer coating is suitable to be used on various fibres and paper materials as it can be applied using conventional spray systems.

SCOPE OF THE REPORT:

This report focuses on the Biopolymer Coating in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The biopolymers possess considerable advantages over traditional oil based coating resins. The demand for biopolymer coating is expected to witness significant growth in the near future as most of the coating end users prefer choosing sustainable products with no hazardous emissions into the environment. The demand for lightweight coating materials has also increased, so as to limit the transportation costs and reduce waste material, creating positive impact on global biopolymer coating market. Several organizations have started using biopolymer coating as a tool to enhance their brand image among customers to attract them by projecting themselves as eco-friendly organizations. However, the biopolymer coating is not suitable for liquid packaging, which is a major restraint for the market growth coupled with price competitiveness with conventional petrochemical resins. The high cost of biopolymers can be reduced through wide scale production and using fillers that are abundantly available in the nature, such as starch. However, the manufacturing process of starch is a time

consuming process. It is expected that new innovations in the market targeting improved usability and operational efficiency will help manufacturers to overcome the barriers, and biopolymer coating will continue to witness widespread adoption across the globe over the forecast period.

The worldwide market for Biopolymer Coating is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
