According to our (Global Info Research) latest study, the global Biopolymer Fiber market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Biopolymer fiber refers to a type of fiber material that is derived from natural sources, typically plant-based or microbial, and is composed of biodegradable polymers. These fibers are considered more environmentally friendly compared to synthetic fibers because they can be broken down by natural processes, reducing their impact on the environment. Biopolymer fibers have a wide range of applications, including textiles, nonwoven fabrics, packaging materials, and biomedical applications.

The demand for sustainable and eco-friendly materials continues to grow across various industries. Biopolymer fibers, being biodegradable and derived from renewable sources, align well with the sustainability trend.
