## **Abstracts**

Manufacturing biologics is a complicated process and thus generally are outsourced by the manufacturers. Bioprocessing is the manufacturing process which helps in producing bio-based products such as vegetable oils, and fatty acids. The major applications of bioprocess industry are vaccines, tissue engineering, biosensors, and biopharmaceuticals. Bioprocessing also is known as biopharmaceutical manufacturing is a bioprocess used for the production of therapeutic cells.

### **SCOPE OF THE REPORT:**

This report studies the Bioprocessing Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Bioprocessing Systems market by product type and applications/end industries.

The global bioprocessing systems market witnessed significant growth owing to increasing demand for bio-based products. The heavy demand for such systems by the industries such as food, pharmaceuticals, nutraceuticals, chemicals and polymers coupled with automation in the industrial process minimizing human errors have propelled the growth of global bioprocessing market. Moreover, the factors such as rising demand for biopharmaceutical production, increasing symptoms of chronic diseases, low manufacturing costs as compared to the artificial source of materials and improvisation of infrastructure in life science research has triggered the global bioprocessing systems during the forecast period 2017-2027. Growing demand for the single use systems of the bioprocessing systems is expected to gain traction during the forecast period which is supposed to augment the global bioprocessing system market.

The factors such as complicated process, lack of technical knowledge, need of skilled operators affects the global bioprocessing systems market. It is observed that most of the manufacturers due to complex work process of the system has started to outsource the bioprocessing systems. It facilitates them to avoid maintenance cost, capital investment, and related work expense. This has shown an adverse impact on the overall bioprocessing systems market.

The global Bioprocessing Systems market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Bioprocessing Systems.
