Abstracts

Bioprosthetics are the material obtained from human or other species for medical implantations. Bioprostheses has shown significant advances from past few years, as their basic characteristic, they become degraded until their complete elimination in the host body. Bioprosthesis will gradually degrade in the recipient will determine the formation of a neotissue in its place, which will completely replace the biomaterial in the long term. Ideally, the bioprosthetics are to achieve not only the repair of the damaged zone but also the regeneration of an adequately organized tissue that will promote angiogenesis and even recruit growth factors acquiring characteristics similar to those of healthy tissue.

According to our (Global Info Research) latest study, the global Bioprosthetics market size was valued at USD 3126.8 million in 2022 and is forecast to a readjusted size of USD 4608.4 million by 2029 with a CAGR of 5.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In 2017, Europe captured a sizeable share of the regional bioprosthetics vertical with a share of near 40.0%. The presence of clearly-defined reimbursement models, prominent industry players, and the large patient volume present in this region are responsible for the large share. Moreover, the formulated, stringent regulatory policies increasingly ensuring patient safety and maintaining high treatment efficacy standards are anticipated to drive the demand for these devices in this region.
