Abstracts

According to our (Global Info Research) latest study, the global Biorationals and Biostimulants market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The biorationals market is growing rapidly due to the increasing demand for organic and sustainable agricultural practices. These products are an essential part of integrated pest management (IPM) programs, which are becoming more common in the agriculture industry. Biorationals include products such as biopesticides, biofertilizers, and pheromones. Biopesticides are derived from living organisms such as bacteria, fungi, and viruses and are used to control pests and diseases. Biofertilizers are used to enhance plant growth by providing nutrients to the plant through beneficial microorganisms. Pheromones are used to disrupt the mating patterns of insects, preventing them from reproducing.

The biostimulant market is also growing due to the increasing demand for sustainable agricultural practices. Biostimulants include products such as humic substances, amino acids, and seaweed extracts. These products are used to improve plant growth and health by enhancing nutrient uptake, stimulating root growth, and improving stress tolerance. Biostimulants are often used in combination with fertilizers and other agricultural inputs to improve plant growth and yield.

The market for biorationals and biostimulants is expected to continue to grow in the coming years due to the increasing demand for sustainable agriculture practices and

the need to reduce the use of synthetic chemicals. The adoption of these products is also supported by government regulations and incentives, as well as consumer demand for organic and sustainably produced food.

In conclusion, the biorationals and biostimulants market is an emerging and growing segment of the agricultural industry. These products offer a sustainable and eco-friendly alternative to traditional agricultural inputs, and their adoption is expected to continue to grow as the demand for sustainable agriculture practices increases.

Biorationals and biostimulants are two categories of products that are gaining popularity in the agricultural industry due to their eco-friendly and sustainable nature. Biorationals are products that are derived from natural sources and are effective in managing pests, diseases, and weeds. Biostimulants, on the other hand, are products that are used to enhance plant growth and improve plant health.
