According to our (Global Info Research) latest study, the global Biorepository Storage Service market size was valued at US$ 738 million in 2025 and is forecast to a readjusted size of US$ 1364 million by 2032 with a CAGR of 9.2% during review period.

Biorepository Storage Service refers to professional services that provide storage, temperature-controlled preservation, inventory management, and quality assurance for biospecimens used in life science research, clinical trials, medical testing, biopharmaceutical development, and biobank operations. The service typically covers blood, serum, plasma, urine, saliva, tissue, cells, nucleic acids, microbial samples, and other clinical or research specimens. By using different storage conditions such as ambient, refrigerated, frozen, ultra-low temperature, or liquid nitrogen storage, together with processes including sample receipt, labeling, aliquoting, accessioning, retrieval, logistics coordination, environmental monitoring, information tracking, and compliance documentation, the service helps ensure sample stability, traceability, and usability throughout the storage period.

Biorepository Storage Service is a fundamental enabling service in life science research, clinical trials, precision medicine, and biopharmaceutical development. Market demand is mainly driven by the growing need of pharmaceutical companies, CROs, medical institutions, research institutes, diagnostic companies, and biobanks for long-term sample stability, standardized management, and compliant traceability. With the development of multicenter clinical studies, translational medicine, genetic testing, companion diagnostics, and real-world research, biospecimens are becoming more diverse, larger in volume, and more closely linked to clinical and research data. This raises higher requirements for temperature control, sample integrity, information

management, quality systems, and cross-regional service capabilities. Overall, the market is evolving from basic frozen storage toward integrated biospecimen management services covering sample receipt, processing, aliquoting, cryopreservation, inventory management, quality control, data management, and regulatory support. Professional service providers with standardized operations and long-term service experience are better positioned to gain recognition from pharmaceutical and clinical research customers.
