## Abstracts

Ocular implants — small devices designed to be inserted into the eye and deliver a drug locally over an extended period — are rapidly gaining ground as a treatment option. As patients continue to seek out convenient, less invasive treatments, the demand for these implants will continue to increase. Bioresorbable implants are inserted into the patient's eye and safely absorbed by the body over time. These implants combine a drug with a polymer — often polylactic-co-glycolic acid (PLGA) — which degrades over time, releasing a drug.

This report studies the global Bioresorbable Ocular Implant production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Bioresorbable Ocular Implant, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2021 as the base year.
