## Abstracts

Bioresorbable polymer-based implants are being widely used for fracture fixation in orthopedic surgery. Orthopedic implants, such as interference screws, plates, pins, suture anchors, meniscal repair implants, and simple fracture fixation implants, are the most commonly used resorbable implants for anterior cruciate ligament reconstruction, shoulder surgery, meniscal repair, and fracture care. When these implants are added to the body, they perform the desired action, and once done, these implants get absorbed in the body by themselves. These resorbable polymer-based implants include sutures, screws, stents, plates, pins, and others used in various orthopedics sub-applications, such as trauma, hip, knee, spine, joint, and other injuries. These implants break down naturally after implantation, during the healing and supporting process.

According to our (Global Info Research) latest study, the global Bioresorbable Polymer-based Implants market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
