Abstracts

Biosensors are used to detect and quantify biological material associated with a disease state or health condition (biomarkers). Biosensors are therefore powerful tools for diagnosis and monitoring. As technological advances allow for such tests to be conducted faster and on smaller devices, these tests are moving out of specialised laboratories and closer to the patient at the point-of-care.

Scope of the Report:

Glucose has been a very common biomarker to target because of its importance for diabetes management. Glucose test strips are the most common point-of-care biosensors on the market today.

The global Biosensors for Point-of-Care Testing market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
