The global Biosensors market size is expected to reach \$ 27010 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

A biosensor is an analytical device, used for the detection of an analyte, it combines a biological component with a physicochemical detector. The sensitive biological element (e.g. tissue, microorganisms, organelles, cell receptors, enzymes, antibodies, nucleic acids, etc.) is a biologically derived material or biomimetic component that interacts (binds or recognizes) with the analyte under study. The biologically sensitive elements can also be created by biological engineering. The transducer or the detector element (works in a physicochemical way; optical, piezoelectric, electrochemical, etc.) transforms the signal resulting from the interaction of the analyte with the biological element into another signal (i.e., transduces) that can be more easily measured and quantified. The biosensor reader device with the associated electronics or signal processors that are primarily responsible for the display of the results in a user-friendly way. This sometimes accounts for the most expensive part of the sensor device however it is possible to generate a user friendly display that includes transducer and sensitive element (holographic sensor). The readers are usually custom-designed and manufactured to suit the different working principles of biosensors.

The Biosensors industry can be broken down into several segments, Non-wearable Biosensor, Wearable Biosensor, Others, etc.

Global biosensors main manufacturers include Abbott, Dexcom, Medtronic and Ascensia Diabetes Care, totally accounting for about 60% of the market. North America is the largest market of biosensors, holding a share about 40%. As for the types of products, it can be divided into non-wearable biosensor and wearable biosensor. As for the

applications of products, it is widely used in medical science, environmental monitoring, food industry, agriculture and others. The most common application is in medical science, with a share about 68%.
