Abstracts

The global Bioseparation Column market size is expected to reach \$ 1434.7 million by 2029, rising at a market growth of 6.8% CAGR during the forecast period (2023-2029).

Bioseparation Column is a technical equipment used for purification and separation of biological products (such as proteins, antibodies, enzymes, etc.). It is a columnar structure made of different materials, filled with materials with specific separation properties, such as affinity chromatography media, molecular sieves, etc. Bioseparation Column uses the interaction between biomolecules (such as affinity, charge, size exclusion, etc.) to achieve selective adsorption and elution of target biomolecules. By passing the sample solution to be processed into the separation column, the target biomolecules can be selectively adsorbed on the packing material in the column, while other impurity components are effectively removed.

This report studies the global Bioseparation Column production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Bioseparation Column, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
