## Abstracts

According to our (Global Info Research) latest study, the global Bioseparation Screening Column market size was valued at USD 904.4 million in 2022 and is forecast to a readjusted size of USD 1434.7 million by 2029 with a CAGR of 6.8% during review period.

Bioseparation Screening Column is a technical equipment used for purification and separation of biological products (such as proteins, antibodies, enzymes, etc.). It is a columnar structure made of different materials, filled with materials with specific separation properties, such as affinity chromatography media, molecular sieves, etc. Bioseparation Screening Column uses the interaction between biomolecules (such as affinity, charge, size exclusion, etc.) to achieve selective adsorption and elution of target biomolecules. By passing the sample solution to be processed into the separation column, the target biomolecules can be selectively adsorbed on the packing material in the column, while other impurity components are effectively removed.
