## Abstracts

The global Biosimilar Drug market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

Biosimilar drug is medicine made using a living system, and historically this was often an animal. Most products being developed as biosimilar drug are recombinant proteins, or proteins derived from genetically engineered DNA. In this report is a biologic defined as proteins, peptides, hormones or antibodies drugs production by bio-engineered technology, but does not include a vaccine.

A biosimilar in this report is a biologic medical product which is copy of an original product that is manufactured by a different company. Biosimilar drug is officially approved versions of original "innovator" products, and can be manufactured when the original product's patent expires.

In China, Biosimilar Drug key players include CP Guojian Pharma, Biotech Pharma, Celgen Pharma, etc. Global top three manufacturers hold a share over 70%.

East China is the largest market, with a share over 70%, followed by North China, with a share about 15 percent.

In terms of product, Tablets is the largest segment, with a share over 65%. And in terms of application, the largest application is Ankylosing Spondylitis, followed by Rheumatoid Arthritis, Tumor, Cardiovascular, etc.

This report studies the global Biosimilar Drug production, demand, key manufacturers, and key regions.
