Abstracts

The global Biosimilar market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

A biosimilar (also known as follow-on biologic or subsequent entry biologic) is a biologic medical product that is almost an identical copy of an original product that manufactured by a different company. Biosimilar are officially approved versions of original 'innovator' products and can manufactured when the original product's patent expires. Reference to the innovator product is an integral component of the approval.

Unlike with generic drugs of the more common small-molecule type, biologics generally exhibit high molecular complexity and may be quite sensitive to changes in manufacturing processes. Despite that heterogeneity, all biopharmaceuticals, including biosimilar, must maintain consistent quality and clinical performance throughout their lifecycle.

In this report is a biologic defined as proteins, peptides, hormones or antibody's drugs production by bio-engineered technology, but does not include a vaccine.

China's core biosimilar players include Qilu Pharmaceutical, Shanghai Henlius and 3SBIO etc. The top 3 companies only hold a share about 61%.

In terms of product, biosimilar monoclonal antibodies is the largest segment, with a share about 85%. And in terms of application, the largest application is cancer with a share about 50%.

This report studies the global Biosimilar demand, key companies, and key regions.
