According to our (Global Info Research) latest study, the global Biotechnology & Pharmaceutical Services Outsourcing market size was valued at USD 61100 million in 2023 and is forecast to a readjusted size of USD 93570 million by 2030 with a CAGR of 6.3% during review period.

When it comes to pharmaceutical research and development however, success is never guaranteed. The average cost of drug development can reach into the billions of dollars, and it takes an average of 10 years to bring a new drug to market. In addition, many drugs fail to be clinical effective and subsequently never see the light of day.

Due to these risks, pharmaceutical companies are not always eager to utilize their onsite resources for drug R&D. Certain cost-saving measures implemented in the pharmaceutical space have included outsourcing these activities, helping organizations reduce both their operational and manufacturing costs, thereby lowering financial risk.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
