Abstracts

When it comes to pharmaceutical research and development however, success is never guaranteed. The average cost of drug development can reach into the billions of dollars, and it takes an average of 10 years to bring a new drug to market. In addition, many drugs fail to be clinically effective and subsequently never see the light of day.

Due to these risks, pharmaceutical companies are not always eager to utilize their onsite resources for drug R&D. Certain cost-saving measures implemented in the pharmaceutical space have included outsourcing these activities, helping organizations reduce both their operational and manufacturing costs, thereby lowering financial risk.
