Abstracts

The global Bipolar High Frequency Hemostat market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The bipolar high-frequency hemostatic forceps integrates a conductive circuit in the small flexible sheath and connects it to the distal forceps head. After the forceps clamps the tissue, it passes high-frequency electricity, and uses high-frequency coagulation to dehydrate the tissue quickly and make the blood vessels Shrink and carbonize, thereby blocking the blood flow and achieving the effect of hemostasis.
