Abstracts

According to our (Global Info Research) latest study, the global Bipolar Micro-switches market size was valued at USD 720.3 million in 2023 and is forecast to a readjusted size of USD 907.1 million by 2030 with a CAGR of 3.3% during review period.

Micro switch, also trademarked and frequently known as miniature snap-action switch, is an electric switch that is actuated by very little physical force, through the use of a tipping-point mechanism, sometimes called an 'over-center' mechanism.

Switching happens reliably at specific and repeatable positions of the actuator, which is not necessarily true of other mechanisms. They are very common due to their low cost and durability, greater than 1 million cycles and up to 10 million cycles for heavy duty models. This durability is a natural consequence of the design.
