Abstracts

The global Birch Sap Powder market size is expected to reach \$ 39.15 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

Birch Sap Powder is a dried, water-soluble ingredient made by collecting birch sap (birch water or juice) tapped from birch trees and then concentrating and drying it to preserve a portion of the sap's naturally occurring sugars, minerals, organic acids and other soluble components in a stable powder form. Birch sap itself is the clear, slightly sweet sap tapped from birch trees and has long been used as a beverage in some regions.

Upstream inputs include birch sap harvesting (typically in early spring during a short tapping window), raw sap collection logistics (hygiene, filtration), concentration, and drying aids or carriers (commonly used for spray-dried powders), plus food/cosmetic-grade packaging. Downstream, the powder is sold to manufacturers of functional beverages and drink mixes, dietary supplements/nutraceuticals, and personal care/cosmetics.

In 2025, global sales of Birch Sap Powder reached approximately 460 tons, with an average global market price of around US\$ 55/kg. The gross profit margin is approximately 20%-40%.

This report studies the global Birch Sap Powder production, demand, key manufacturers, and key regions.
