According to our (Global Info Research) latest study, the global Birch Sap Powder market size was valued at US\$ 26.04 million in 2025 and is forecast to a readjusted size of US\$ 39.15 million by 2032 with a CAGR of 7.0% during review period.

Birch Sap Powder is a dried, water-soluble ingredient made by collecting birch sap (birch water or juice) tapped from birch trees and then concentrating and drying it to preserve a portion of the sap's naturally occurring sugars, minerals, organic acids and other soluble components in a stable powder form. Birch sap itself is the clear, slightly sweet sap tapped from birch trees and has long been used as a beverage in some regions.

Upstream inputs include birch sap harvesting (typically in early spring during a short tapping window), raw sap collection logistics (hygiene, filtration), concentration, and drying aids or carriers (commonly used for spray-dried powders), plus food/cosmetic-grade packaging. Downstream, the powder is sold to manufacturers of functional beverages and drink mixes, dietary supplements/nutraceuticals, and personal care/cosmetics.

In 2025, global sales of Birch Sap Powder reached approximately 460 tons, with an average global market price of around US\$ 55/kg. The gross profit margin is approximately 20%-40%.
