Bird repellent is a preparation specially designed to repel birds, usually made from natural or natural equivalent raw materials. Bird repellent interferes with the sensory system of birds by releasing a special smell. This smell will irritate the nervous and respiratory systems of birds, making them feel uncomfortable and quickly flee. Specifically, the smell of bird repellent can be divided into two categories: one is the smell that stimulates the nerves of birds, which drives birds away through physiological intimidation; the other is the smell that resembles the natural enemies of birds, which prevents birds from approaching through psychological intimidation.
