According to our (Global Info Research) latest study, the global Birefringent Crystal Yttrium Vanadate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

YVO4 is a positive uniaxial crystal grown by the Czochralski method. It has good mechanical properties, large birefringence and a wide transparency range, which make it ideal for many optical polarizing components, such as beam displacer and Glan polarizer. Compared to calcite, YVO4 has better temperature stability, mechanical properties, and is not susceptible to moisture. Compared to Rutile (TiO₂), YVO4 is easier thus cheaper to polish.
