Bismaleimide (BMI) is yellow to brownish fine crystalline powder, which is a new class of thermosetting polymers that have gained huge acceptance in recent years due to their excellent thermal and electrical properties over a wide range of temperature.

SCOPE OF THE REPORT:

Bismaleimide resins are a relatively young class of thermosetting polymers that are gaining acceptance by industry because they combine a number of unique features including excellent physical property retention at elevated temperatures and in wet environments, almost constant electronica properties over a wide range of temperatures and no flammability properties. Bismaleimide resin has become a leading class of thermosetting polyimides, though its share in PI is not as large as PEI, etc.

The largest consumption area of bismaleimide is composites, which accounted for 55.11% of world bismaleimide consumption in 2015. Adhesive and moldings are also in fast increase, but the share of composites would develop more quickly. The price of bismaleimide resin is low compared with other polyimide, but higher than epoxy resin. In the future, the price of bismaleimide would decrease, making it more competitive in advanced polymer market.

The worldwide market for Bismaleimide is expected to grow at a CAGR of roughly 0.9% over the next five years, will reach 260 million US\$ in 2024, from 240 million US\$ in 2019, according to a new GIR (Global Info Research) study.

This report focuses on the Bismaleimide in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
