Abstracts

The global Bismuth Vanadate market size is expected to reach \$ 160 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global Bismuth Vanadate in Automotive production reached approximately 4715.6 tons, with an average global market price of around US\$22192 usd per ton. The production capacity for Bismuth Vanadate in 2025 was approximately 5000 tons. The typical gross profit margin for Bismuth Vanadate is between 20% and 40%. Bismuth Vanadate (BiVO₃) is an inorganic compound widely used as a high-performance yellow pigment due to its bright color, excellent opacity, and strong weather and heat resistance. It is regarded as an environmentally friendly alternative to traditional lead- and cadmium-based yellow pigments and is commonly applied in automotive coatings, industrial paints, plastics, inks, and construction materials. In addition to pigment applications, bismuth vanadate is also studied as a functional material in photocatalysis because of its visible-light response.

The Bismuth Vanadate market is driven by growing demand for high-performance, environmentally friendly inorganic pigments used in coatings, plastics, inks, and construction materials. Bismuth vanadate pigments are valued for their bright yellow color, excellent heat and weather resistance, and non-toxic nature, making them a preferred replacement for traditional lead- and cadmium-based pigments. Market growth is supported by increasingly strict environmental regulations, rising use of premium architectural and industrial coatings, and demand from automotive and consumer goods applications. Europe and Asia-Pacific are the key markets, with industry trends focusing on improved pigment dispersion, higher color strength, and enhanced durability for outdoor and high-end applications.

This report studies the global Bismuth Vanadate production, demand, key manufacturers, and key regions.
