Bisphenol A (BPA) is an organic synthetic compound with the chemical formula $(CH_3)_2C(C_6H_4OH)_2$ belonging to the group of diphenylmethane derivatives and bisphenols, with two hydroxyphenyl groups. It is a colorless solid that is soluble in organic solvents, but poorly soluble in water. BPA is a starting material for the synthesis of plastics, primarily certain polycarbonates and epoxy resins, as well as some polysulfones and certain niche materials. BPA-based plastic is clear and tough, and is made into a variety of common consumer goods, such as plastic bottles including water bottles, sports equipment, CDs, and DVDs. Epoxy resins containing BPA are used to line water pipes, as coatings on the inside of many food and beverage cans and in making thermal paper such as that used in sales receipts.

Scope of the Report:

This report focuses on the Bisphenol-A in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Bisphenol A is extensively used in the production of polycarbonate plastics. Polycarbonate plastics are widely used in the production of food & beverage containers, impact resistant eye glass lenses, streetlight globes, medical devices, electrical & electronic components, household appliances, automotive parts, telephones, and safety & sports helmets. Besides this, polycarbonate sheets are used in signboards, windows & window protection, roofing structures, walkways, greenhouses, and construction glazing & skylights. The increasing construction activities, and production of automotive; medical devices, tools & equipment; and containers, bottles & canned packaging for food & beverage packaging, around the world, has led to the rise in demand for

polycarbonate plastics, which is driving the demand for BPA to produce polycarbonate plastics.

It is found that BPA application in the plastics used in food containers, baby toys, water bottles, etc. can cause health hazards to babies, as well as adults. The studies revealed that use of BPA-based products in such products can cause variety of health issues, from prostate cancer & breast cancer to early puberty, decreased fertility, neurological problems, and changes immune system. With all such increasing concerns among the consumers, the demand for BPA free products has started increasing, which is likely to serve as a restraint for the market.

Asia-Pacific holds the largest share of the market and is projected to witness highest growth during the forecast period. Growing industrial applications of BPA products, primarily in countries, such as, China, India, and Japan, are expected to drive the Asia-Pacific BPA market. With the increasing investments and rapid growth in the industries, such as food & beverage, electronic devices, etc. and boom in construction activities in the region, the application of bisphenol A is expected to increase in the production of food & beverages containers, polycarbonate sheets and electronic devices, further driving the market demand during the forecast period. Besides this, North America and Europe are expected to register moderate growth, with significant applications of BPA in automotive and wind energy sectors, during the forecast period.

The worldwide market for Bisphenol-A is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
